I.D. Systems Enters Agreement with Wal-Mart to Pilot Wireless Industrial Vehicle Management System

Hackensack, NJ, November 14, 2005 —

I.D. Systems, Inc. (NASDAQ: IDSY), a leading provider of RFID-based wireless asset tracking and management solutions, today announced that it has entered into an agreement with Wal-Mart Stores, Inc. (NYSE: WMT) to deploy I.D. Systems' Wireless Asset Net™ industrial vehicle management system at a Wal-Mart distribution center in Texas. This deployment will serve as a pilot program for Wal-Mart to evaluate the benefits of the system on material handling vehicle operations, productivity, safety, and maintenance.

Wal-Mart is the world's largest retailer, with fiscal 2005 revenues in excess of \$285 billion.

"We are excited and proud to have an opportunity to establish a relationship with – and serve – Wal-Mart, which is a true leader in supply chain management and RFID technology," said Rick Muntz, I.D. Systems' executive vice president of sales, marketing, and customer satisfaction. "Establishing our industrial vehicle management technology as a best practice in challenging operational environments like Wal-Mart's is, very simply, what we do. Our team has worked hard and is well equipped to demonstrate how our solution can help improve Wal-Mart's management of material handling vehicles."

About The Wireless Asset Net™

The Wireless Asset Net consists of intelligent wireless devices installed on powered industrial vehicles (such as fork trucks and pallet movers), a patented communication infrastructure, and client-server software for access control, utilization analysis, real-time location tracking, and many other functions. The system is designed to improve industrial workplace safety and security by restricting vehicle access to trained, authorized operators and by providing electronic safety inspection checklists. The system is designed to reduce maintenance expenses by automatically uploading vehicle data, reporting vehicle problems in real time, scheduling maintenance according to actual vehicle usage rather than on a calendar basis, and helping plant management determine the optimal economic time to replace equipment. The system is also designed to help improve productivity by ensuring equipment is in the proper place at the right time and by providing management with unique reports on vehicle utilization.

About I.D. Systems

Based in Hackensack, New Jersey, I.D. Systems, Inc. is a leading provider of wireless solutions for corporate asset management. I.D. Systems' customers include 3M Company, American Axle, Archer Daniels Midland, DaimlerChrysler, Deere & Co., Ford Motor Company, General Dynamics, Hallmark Cards, Northrop Grumman, Target Corporation, Walgreen Co., the U.S. Navy, the U.S. Postal Service, and the U.S. Transportation Security Administration, among others. Using local area networks, wide area networks, and the Internet, the company's systems enable management to control and track the location and status of their assets — from forklifts and cranes to automobiles and trucks to complex fixed machinery — in real time.
